

Bungee Mount Compass / Computer

Not my idea, but here's how I did it... - Zinc

Here's an option for bungee mounting a "puck" style compass or computer

Cut the straps off a wrist mount or use clip off mount for your "puck" style compass or dive computer

Drill 8 holes (4 bottom / 4 sides), using a drill bit at least 50% larger than the shock cord to compensate for the rubbers elasticity

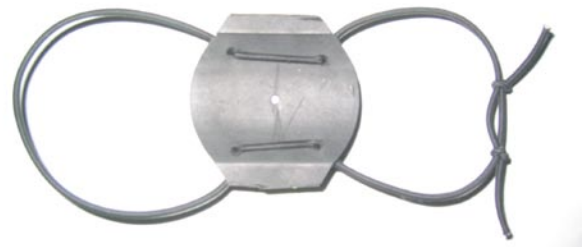

Drill 4 holes in the bottom

Drill 4 holes in the side, lining up with the hole in the bottom

Thread the bungee

Tie the two slide knots on the wrist side to allow adjustment

That's it...
