

## CROWN OF THORNS CLEANUP

Crown of thorns starfish are one of the deadliest and most efficient coral predators in the ocean. They feed on live corals, and when their numbers are high, they can effectively reduce a whole area of coral reefs into a graveyard of coral skeletons.

In recent years, there has been a significant increase in the crown of thorns population in the surrounding waters of Layang Layang and vast areas of corals have fallen victims to them. Now, we're calling all divers to help save the reefs in Layang Layang from these killer mollusks!

Date : Month of August 2010

Price : RM 2,800 per person on twin share  
RM 3,240 per person on single supplement

Includes : • 8 cleanup dives  
• 4 leisure dives
