

Pacer® XP & Pacer Ice

NEW

Pacer® XP:

The rugged XP Pacer® Second Stage is a classic Dacor design that is the choice of many experienced divers who prefer the ultimate in a non-adjustable second stage. This proven easy breather is paired up with the Pacer® First Stage, a high performance unit with an exceptionally lightweight, low profile construction.

Pacer® Ice:

Suitable for extreme cold water diving. Features include a dry sealed first stage that is impervious to cold. The second stage has Teflon coated internal components to help prevent icing. This is the ultimate cold water diving regulator. It is a popular choice for ice divers and is CE certified for cold water.

Second Stage: (same for both XP and Ice)

- Mechanically balanced for smooth and easy inhalation/exhalation
- Dual exhaust valves
- Built-in purge depressor minimizes wear on low-pressure seat and features locking purge button for storage
- Teflon-coated internal components resist icing

First Stages:

- Pneumatically balanced diaphragm design for consistent performance
- Compact, low-profile design
- Dual high pressure ports allow for left/right hose routing or redundant gauge use
- Four low-pressure ports – two 1/2" and two 3/8"
- Pacer Ice version is environmentally sealed for additional protection in extreme cold
