

GUIDELINES

— FOR DISINFECTION OF DIVE GEAR —

1 Soak all of your gear for 10 minutes in a 1% bleach solution

Use immediately after mixing

1/2 cup of bleach for every 2 gallons of fresh water.

Don't forget your BC internal bladders!

2 Rinse all of your gear in fresh water (e.g., in a 5 gallon bucket)

Properly dispose of disinfectant solutions by rinsing waste into sink or shower. Remember, chlorine will break down in the sun!

3 Allow gear to air dry thoroughly
