

**EEEZ Pouch** by

Patent Pending

[www.eeezsolutions.com](http://www.eeezsolutions.com)

**Getting weight pouches in and out of your BCD is a PAIN!  
*EEEZPouch* fixes that – and it's the only product that does.**

### **Introducing: EEEZPouch**

- ✓ The *EEEZPouch* is easily inserted into the Hydros and S-TEK BCD weight pocket and provides a new, unique option for these BCDs.
- ✓ The *EEEZPouch* is made of very high-quality, 600D Waterproof fabric, like the Hydros and S-TEK BCD. The exterior is coated with PVC while the interior maintains a natural, smooth, friction free material that requires little to no maintenance and provides reduced drying time.
- ✓ The *EEEZPouch*, due to its construction design, keeps the BCD's weight pocket's mouth open facilitating finding and inserting the weighted pouches into the pockets. This is especially helpful when wearing a wet suit and hood with restricted mobility and visibility to the weight pockets.
- ✓ The *EEEZPouch* allows Hydros and S-TEK weight pouches to easily be inserted and removed from the integrated weight pockets.
- ✓ Instructors can carry additional weight and easily remove their weight pouches in order to provide students, while at depth, additional weight if they are underweighted.
- ✓ Small items (such as a safety mirror) may be connected with a lanyard to a D Ring & stored between the *EEEZPouch* and the BCD weight pocket for streamlined stowage and easy access.

**EASY TO REMOVE IN AN EMERGENCY/DUMP SITUATION**

## Construction Details

Each pouch is constructed with a double layer of materials consisting of the following properties:

**Content:** 100% Polyester, 100% Polyvinyl Chloride (PVC) Backing

**Denier:** 600D x 600D

**Care:** Brush, Wipe and Spot Clean with Mild Cleaning Solution

 **WATERPROOF**

 **MILDEW RESISTANT**

*EEEZPouch* comes with a **Lifetime Warranty** against manufacturing defects *and* a **NO Hassle** return policy

1. The *EEEZPouch* will keep the pocket mouth and entire pocket open and ready for the weight pouch to be inserted and secured in place.

2. The “loop” fixation straps go over the weight pouch side mounts and are held secure by the “hook” fabric
