

FLORIDA CAVE DIVING ACCIDENT REPORT

Instructions- This form is to be filled out after any cave diving recovery by a trained member of the FCUCRR (Florida Cracker Underwater Cave and Recovery). This document serves as a critical information for the FCUCRR GOB (Good Ole Boys) Council to be confident that everything was done according to plan. It is important that the instructions for filling out this form be followed closely, we wouldn't want to see anything happen to you.

Time Incident reported to FCUCRR (Make sure that there is not a big gap between when the instructor/shop became aware and when reported) _____

Location (Please be aware that certain caves or locations may be club secrets, please contact the GOB council before filling this part out) _____

Where the victim bought gas (IMPORTANT NOTE- unless they flew in, they brought gas with them and did NOT purchase in cave country) _____

Was it a training dive? (SUPER IMPORTANT NOTE, if it was a training dive, make sure that the GOB council is informed so they can get the deceased a back dated card) _____

Assumed cause of death

a/ Medical , most likely heart attack (note, everyone that dies has heart failure at some point, this is our favorite)

b/ They broke the rules of cave diving and nothing to learn from this (note, we prefer this be used with out of town types, locals dive with us and they would never die like this)

c/ If anything but a or b, pick either a or b.

If you become aware of anybody that is trying to find out what really happens, we suggest that you inform the GOB Council Immediately. We shall attack them as quickly as possible on social media and by grape vine that they are simply disrespecting the good work of the ~~victims-instructors~~ recovery divers who do this at great risk and for no reward.

Remember your training! We can't release any information that would allow accident investigation because if we did, trends and dive safety would be improved. We spent many pizza nights drinking shine and doing meth to come up with implausible lies about the liability and evidence chain that sounds logical to the uncritical thinker with no experience in such matters. STICK TO THE SCRIPT or you will find yourself back in the keys teaching open water divers having gotten tired of flat tires and all your students being told you are an unsafe cave instructor. We enjoy doing that anyway if you start to get well known but will be less likely to if you play along.

On behalf of the GOB Council of the FCUCCR, we would like to take this time to thank you for playing your part to make sure nothing changes and never will.
