## SCUBAPRO® Mark 10PLUS First Stage Mark 10 to Mark 10PLUS Conversion

Mark 10 first stages can be upgraded to the Mark 10PLUS by retrofitting the modified parts included in the upgrade kit. In the illustration below, the parts that are shown in the top row are the Mark 10 parts that are discarded. The middle row of components and assemblies are reused in the upgrade process. The bottom row of parts are the parts included in the upgrade kit. It is highly recommended that any time an upgrade is done that an annual service procedure is also done at the same time. See the Mark 10PLUS schematic or dealer price list for part numbers and costs.

### Important Note:

Do not attempt this upgrade unless all of the parts included in the kit are replaced. Mixing the original Mark 10 parts with the new Mark 10PLUS parts incorrectly may cause excessively high intermediate pressures.
